

FatPipe Networks Recognized on CRN's Inaugural Software-Defined Data Center 50 Lists

March 17, 2017

FatPipe® Networks, the inventor and multiple patents holder of software-defined networks for wide area connectivity and hybrid WANs, announced today that CRN®, a brand of The Channel Company, has named FatPipe Networks to its 2017 Software-Defined Data Center 50 list. This inaugural list recognizes channel-friendly companies that provide some of the most innovative data center technology available.

Selected by CRN editors, the 2017 Software-Defined Data Center 50 list recognizes technology vendors that are leading the way in meeting a growing need for state-of-the-art offerings that virtualize infrastructure and deliver it as a service. These vendors are instrumental in helping solution providers select and deploy the right tools for building virtualized environments—a critical first step in transitioning customers to the cloud. In addition to honoring vendors for outstanding products and services, the list serves as a valuable guide for solution providers looking for best-in-class software-defined data center technology suppliers.

CRN editors select companies for the Software-Defined Data Center 50 list on the basis of multiple criteria, including each company's overall impact on the market, its influence on the

channel as a whole, and the desirability of the technology and services it makes available to its partners.

As one of the leading vendors for WAN link load balancing and WAN path control with thousands of customers across six continents and intellectual property defining SD-WANs, FatPipe's SD-WAN platform includes key features that transcend WAN failures to maintain business continuity, including zero-touch branch deployment, hybrid WAN connectivity, tuned application performance, easy integration, granular WAN visibility, multi-path security, secure full mesh VPN connectivity and flexible centralized policy deployments.

"Data centers are evolving rapidly, with the rise of software-defined solutions enabling centralization, automation and scale on an unprecedented level," said Robert Faletra, CEO of The Channel Company. "The vendors on CRN's Software-Defined Data Center 50 list enable solution providers to reap the powerful benefits of this new technology: optimal computing speeds, superior data storage and management

capabilities, reliable power and excellent energy efficiency. We congratulate this year's Software-Defined Data Center 50 on the technical ingenuity and effective partnership-building that have earned them this important place in the IT channel."

"We are honored that CRN has recognized our SD-WAN technology by naming FatPipe to the inaugural CRN Software-Defined Data Center 50 list," said FatPipe's CTO Sanch Datta. "With our SD-WAN platform, our global channel partners are offering unprecedented, high-performance SD-WAN solutions to geographically dispersed companies of all sizes across multiple verticals - helping companies rely on their WAN to maintain quality network performance and business continuity."
